

Disclaimer for System Recommendations

This disclaimer releases RIS from any PCI Compliance liability relating to using non-recommended hardware / software required to maintain PCI Compliance on your system.

If you choose not to follow system recommendations of hardware / software for PCI Compliancy please be aware that problems may arise that are preventable by following the recommendations of hardware / software on your system. Extensive testing is done with the recommended hardware / software requirements and is fully supported by RIS and manufacturer and meets the highest PCI Compliancy standards.

If you choose not to follow the system recommendations then your hardware / software choices may expose you/your business to risk. Existing / own purchased PCI Compliant equipment can be used and still be secure but equipment not familiar to RIS or RIS technicians may leave open the possibility of vulnerability.

Regardless, RIS recommends 3rd party QSA Scans of internal and external network for non-compliant PCI-DSS vulnerabilities from Qualys or similar company. Actual Pricing for Scans comes from Qualys - RIS has no control on scan contract pricing.

I have been advised by RIS to use all RIS PCI Compliant recommendations on my system.

_____ **Initials**

I have declined using RIS system recommendations and fully understand and agree to the consequences and I will not hold RIS responsible or liable for any known or unknown PCI vulnerabilities, data breach, fines or penalties.
